

WEDNESDAY, JANUARY 11, 1920

The Graham Glass Company are manufacturers of Owens machine-made bottles.

Eighty-five per cent of all bottles are Owens machine-made bottles.

Throughout the world *Owens* is synonymous for bottles—bottles of unusual strength—always exact in weight and correct in capacity.

Above is an illustration of the Owens Automatic Bottle Blowing Machine.

This machine has made possible the production of better bottles than we had ever known before.

It is capable of a quantity production previously impossible, and the bottles so made are of a strength and uniformity beyond all precedent.

The Graham Glass Company operates plants in several cities, but maintains its headquarters at Evansville.
